 - The instant application is deemed to be directed to a non-obvious improvement over the admitted prior art of the instant application and the invention patented in Pat. No. 6,128,351, 6,594,226, 6,697,641 and Ariyavisitakul, "A Decision Feedback Equalizer with Time-Reversal Structure", IEEE Journal on selected area in communications, vol. 10, No. 3, April 1992, and WO 00/14921. The improvement comprises-
With regard claims 2, 4, 5, 44 and 45, "processing of the first symbol sequence comprises time reversing and complex conjugating the first symbol sequence to generate the third symbol sequence, and processing of the second symbol sequence comprises time reversing, complex conjugating and negating the second symbol sequence to generate the fourth symbol sequence" in combination with other

limitation as claimed in claims 2, 4, 5, 44 and 45, respectively, as recited,

With regard claim 6, “the dividing of the sequence of symbols further comprises assigning symbols to the first symbol sequence and to the second symbol sequence such that there is an equal amount of symbols in each of the first and second symbol sequences and that correlation between symbols close to each other in each of the first and second symbol sequences is not significantly effected.” in combination with other limitation as claimed in claim 6 as recited;

With regard claim 37, “each of the first and second symbol streams and that correlation between symbols close to each other in each of the first and second symbol streams is not significantly effected; and processing the plurality of symbol streams before transmitting each symbol stream through a channel, wherein processing the plurality of symbol streams comprises time-reversing at least one of the symbol

streams before transmitting the at least one of the processed symbol streams." in combination with other limitation as claimed in claim 37 as recited.
